Introduction

The Archipelago Exchange (ArcaEx) is a trading venue for equities. Operating under the regulatory oversight of the Equities division of the Pacific Exchange (PCXE) as Self Regulatory Organization (SRO) for ArcaEx, eligible stocks include the NYSE, AMEX, NASDAQ and PCX listed securities. On ArcaEx, all orders are electronically matched without the use of a trading floor or human intervention using Price/Time priority through the Archipelago Trading System. In order to participate in the Archipelago Exchange, registered broker/dealers and their clearing firms are required to become Equity Trading Permit holders (ETPs) of the PCXE. This is functionally the equivalent of exchange membership at other exchanges. Trading entities that are not broker/dealers may access ArcaEx by becoming a Sponsored Participant (ETSP) and having an ETP holder sponsor their firm.

When a trade is matched on the ArcaEx, the execution occurs between two ETP holders. If the trade is routed away from ArcaEx, the execution contra will be the ETP Id of the routing broker, ARCA for listed and ARRB for OTC.

See Appendix I of this document for an example of the ArcaEx Trade Clearing Exhibits.

Additional information and an ETP Application may be found at:
<http://www.archipelago.com/exchange/pdfs/ETPApplications.pdf>

Clearing Overview

Like other exchanges, all transactions are submitted directly to Depository Trust Clearing Corporation (DTCC) as locked-in trades with both sides of the transaction identified. ArcaEx submits trades to their facilities manager, the Securities Industry Automation Corporation (SIAC) for processing several times during the trading day. Since ArcaEx is a registered facility of the Pacific Exchange, PCXE will appear as the market of execution for all trades.

All trades executed on ArcaEx appear on DTCC's PCXE Regional Interface Organization (RIO) report. ArcaEx will not report any trades via ACT, QSR or Correspondent Flip.

The RIO report will detail all trades executed on ArcaEx and will include the contra ETP ID. ArcaEx submits trades to DTCC for processing 6 times during the trading day. Self Clearing ETP holders (CETP) receive their RIO output from SIAC at approximately 2:00 am (EST) on T+1. ArcaEx encourages all CETPs to contact their DTCC representative to arrange for receipt of the PCX RIO Output.

See Appendix II of this document for an example of the ArcaEx / PCX RIO output.

As executions occur during the trading day, they are available to a participant and/or their clearing firm via the Archipelago Orders and Fills (AOF) process. AOF publishes

executions via a secure website where users may download trade information in a CSV format. Basic trade execution information is available via AOF within 6 minutes of the trade. Contra-party execution information is available via AOF at approximately 4:15 pm ET. The RIO Id is displayed on AOF at 11:00 pm ET. In Q1 2003, it's expected that this trade information will be available in an FTP format that is "pushed" out to ETPs and their clearing firms. To be permissioned for the AOF, please contact your Arca Sales Rep or ArcaEx Connectivity at 888-689-7739 or Connectivity@tradingarca.com.

Access to ArcaEx for Order Entry

There are two ways to enter orders into ArcaEx:

- The FIX protocol is supported for those firms that have their own Order Management Systems (OMS). FIX allows for ETPs to customize trade identification; this trade information may in turn be passed through to the clearing firm to aid in post trade processing.
- For firms that do not have an OMS, RealTick®, an application developed by Townsend Analytics, L.L.C., is available for order entry and management. ETPs connecting via RealTick may also utilize client identification information that may be passed on to clearing firms to aid in subsequent trade processing.

For more information on connectivity options and requirements, please contact the ArcaEx Connectivity group at 888-689-7739 or Connectivity@tradingarca.com.

Execution Information

When fills occur on ArcaEx, fill reports are sent back to the customer either via FIX or RealTick. In addition to fill reports, information about ArcaEx executions is also available in several other formats as described below.

- **FIX Drop Copy** – Drop copies of executions are available via FIX for firms that have the capability to receive and process them. Firms may elect to use this as a backup to their customer side clearing process or as a primary source for bookkeeping information. FIX drop copies may be directed to the ETP's clearing broker as well. Please see Appendix III in this document for further drop copy information.
- **AOF Website** – ArcaEx execution information is also posted to the AOF Secure Website where it may be retrieved by ETPs and their clearing firms. ETPs and their clearing firms may choose to download information in a .CSV format (Excel) from the AOF Secure Website to assist in back office processing. In Q1 2003, it's expected that this trade information will be available in an FTP format that is "pushed" out to ETPs and their clearing firms. Please see Appendix IV in this document for further information.
- **DTCC** – ArcaEx execution information for all trades is transmitted to the DTCC for inclusion in the national clearing process and will appear on the RIO report. The RIO

report will be the source for all trades executed on ArcaEx. It is important to note that OTC securities executed on the ArcaEx will appear on the RIO report just as listed exchange traded securities; these trades will not appear on OTC contracts. DTCC also offers the Unified Trade Output (UTO), which will act as an enhanced and expanded version of the RIO report. While the UTO report is currently available, the expanded and firm-specific information such as the OnBehalfOf, SenderSubID, ClOrderID and ExecutionID data fields may not be available until Q1, 2003. Participants should contact their DTCC representative for more information. Please see Appendix V in this document for further information.

ETP Identification within ArcaEx

ArcaEx uses a series of identifiers to define the client and their orders. Some of these identifiers are ArcaEx assigned and others are determined by the ETP. The ArcaEx assigned identifiers, such as Domain, are used to assist clients with unique needs for Billing and Clearing. Below are other key identification fields:

- Primary Identifier
 - ETPid – Each registered broker-dealer who applies and is approved for trading on ArcaEx will be assigned an ETP ID. This is a unique 5 character mnemonic that is generally comprised of the firm’s NASDAQ MMID plus an A. An example of an ETP ID would be WXYZA. The ETP ID is returned to the client in the FIX *OnBehalfOf* tag.
- Secondary Identifiers
 - FIX Clients
 - *SenderSubId* – sent by the client to identify the trader, branch or other subgroup of users SenderSubId is not passed on to SIAC for display on the RIO output. It is, however, available on the DTCC’s Unified Trade Output and/or AOF.
 - *ClOrdId* – Sent by the client as an order reference value for each order sent – usually unique. ClOrdId is not passed onto SIAC for display on the RIO output. It is, however, available on DTCC’s Unified Trade Output and/or AOF.
 - *CompId* - used to identify the “connection” between ArcaEx and the ETP or ETSP. Usually similar to the Domain, the CompId is used for billing. CompId is not passed on to SIAC for display on the RIO output but is made available on AOF reports.
 - RealTick Clients
 - Domain – used to identify a group of users within the same firm; this may be based on function (Block Desk, Arb Desk etc.)
 - User – used to identify the person logged onto the Realtick Trading System. This information is not passed on to clearing. User is not passed on to SIAC for display on the RIO output. It is however available on AOF.

In Q4 2002, ArcaEx will add a unique *Execution Id* to each transaction. This *Execution Id* will be made available on the output from DTCC, AOF, FIX fill reports and FIX drop copies.

Contra Party Information and Locked In Trades

The Archipelago Exchange provides matching of trades in an anonymous manner and does not publish Contra Party information until approximately 4:15 p.m. ET on the AOF Secure Website. As an electronic venue, all transactions are submitted directly to DTCC as locked in trades with both sides of the transaction identified.

Specifics of Execution Information

FIX executions and drop copies contain:

- *OnBehalfOf*
- *SenderSubId*
- *ClOrdId*
- *Execution Id*¹

The AOF Website reports contain:

- *OnBehalfOf*
- *SenderSubId*
- *ClOrderId*
- *RIO Id*
- *Execution Id*
- *User*

DTCC RIO output will contain:

- *OnBehalfOf*
- *RIO Id*
- *Execution Id*

DTCC Unified Trade Output² will contain:

- *OnBehalfOf*
- *SenderSubId*
- *ClOrderId*
- *Execution Id*

Reconciliation

ArcaEx provides ETP holders with the customer and street side execution information as well as the four key pieces of information shared by ArcaEx and DTCC (*OnBehalfOf*, *SenderSubId*, *ClOrderId* and *Execution Id* upon implementation of the expanded format) to simplify reconciliation processing.

Information Flowchart

FIX TAG	Sent by ETP	FIX Drop	AOF Field Name	Unified Trade Field names	Pacific RIO Field name
---------	-------------	----------	----------------	---------------------------	------------------------

¹ *Execution ID* available Q4 2002

² Expanded UTO available Q1 2003

		Copy Field Name		- DTCC- (subject to modification by DTCC)	- DTCC-
<i>Via FIX</i>					
32	ClOrdId	ClOrdId	ClOrdId	Client Id plus 2 nd Client Id Fields (296-310 plus 311-325)	N/A
50	SenderSubId	UserTag1	UserTag1	Order Id Fields (281-295)	N/A
115	OnBehalfOf	N/A	ETPid	Entering Broker Fields (47-50)*	Buy/Sell Executing Broker Fields(97-100 or 101-104)*
<i>Via Realtick</i>					
N/A	Domain	UserTag1	UserTag1	Order Id Fields (281-295)	N/A
N/A	User	User Name	User Name	N/A	N/A
Added by ArcaEx					
TBD	Execution Id	TDB	RIOId	Market Control Number Fields (326-334)	N/A

The fields in the chart above identify all key matching information for reconciling both the customer and the street side of ArcaEx executions.

- Customer Side Information - Many ETPs receive customer clearing information from their own internal systems as executions occur. ArcaEx provides ETPs a copy of the execution that may also be used to build the customer side of the trade via FIX drop copies or AOF website reports. Fix drop copies may also be sent to third parties such as clearing firms.
- Street Side Information – Street side clearing information is available from DTCC on either the PSE RIO or the UTO outputs. ArcaEx publishes the information that will be sent to DTCC for ETPs trades on the AOF website. This clearing information may be previewed by accessing the AOF website after 4:15 pm ET when the contra side information becomes available.

Appendix V of this document contains the DTCC Specifications for both the PSE RIO and the UTO output files. Contact your DTCC representative to obtain the most up-to-date programming specifications.

Compression

Trade compression is the process whereby many trades are aggregated into as few trades as possible based on the specific compression criteria of ETP holder, Contra ETP holder, stock, and side. Frequently called “bunching,” compression is important to reducing overall clearing costs.

- On the ArcaEx, parties trade directly with each other and trades may be compressed by ETP holder, Contra ETP holder, stock, and side.
- ETP holders must agree to two-sided compression. The ArcaEx trading and clearing systems will maintain relationship tables identifying the ETP holders who agree to two-sided compression. If one ETP holder agrees to two-sided compression and the other does not, the system cannot compress that trade.
- ArcaEx will compress trades by ETP holder, domain, ETP contra, domain, stock, and side, and show the total volume at an average price to **six** decimal places, (eg., \$22.123456).
- ArcaEx will process and submit compressed trade records to DTCC twice a day corresponding to the core session times of 12 pm and 4 pm ET.
- ArcaEx will only compress trades executed from 8 am ET to 4 pm ET. For any compression cycle, the system will use trades up to the time of the compression cycle. For example, if ArcaEx compresses at 12:00:00 pm ET, the system should only compress trades executed from 8 am ET to 12 pm ET. These compressed records will be submitted to DTCC on the next scheduled RIO transmission. When ArcaEx compresses trades again at 4 pm ET, the system will compress trades executed from 12:00:01 pm ET to 4:00:00 pm ET. Again, these compressed records will be submitted to DTCC on the next scheduled RIO transmission.
- At the end of the trading day, ArcaEx will post the compressed trade records as well as the detail trade records on the AOF website for customer use.

See Appendix VI in this document for an example and additional compression information.

Confirms

All transactions that occur on ArcaEx are reported with the market of execution designated as the Pacific Exchange (PCXE).

Trading as a Sponsored Participants

Firms that are not Broker/Dealers may trade on the ArcaEx by gaining sponsorship (SP) through an ETP holder. All of the ArcaEx technical connections will function as if the SP was an ETP holder but all trades executed and cleared will be displayed under the name of the sponsoring ETP. A list of ETPs may be found on the Archipelago website (www.Archipelago.com) under the “Exchange” section.

Trade Adjustments, Busts and Clearing Questions

All modifications and trade busts are performed by the ArcaEx using its interface to DTCC. It is not possible to pick up or modify trades using ACT or OCS as these are proprietary systems of NASDAQ and NYSE. Trade busts are submitted to DTCC as reversals of the original trade record and identified on the RIO output with an “R” indicator in the RV Ind field. See Appendix II of this document for an example of a PSE RIO reversal.

- All ArcaEx trade bust or price adjustment requests must be communicated to the ArcaEx Trade Support desk. The ArcaEx Trade Support desk may be reached at 1-888-513-9873 or Trading@tradedearca.com from 8:00 am to 8:00 pm (ET).
- If you have trade breaks or have clearing questions, please contact the ArcaEx Security Operations department at 312-442-7089 or ExchangeSecOps@tradedearca.com from 8:00 am to 8:00 pm (ET).

See Appendix II in this document for additional information.

Appendix I – ArcaEx Trade Clearing Exhibits

Exchange Clearing

Arca reports all executions performed on the ArcaEx to NSCC via the daily RIO transmissions. ETP holders or their clearing firms receive PCX / ArcaEx RIO blotters from NSCC for executions performed on the ArcaEx on T+1. These blotters display the contra ETP Id.

Routing Broker Clearing

Arca reports all executions performed on the ArcaEx to NSCC via the daily RIO transmissions. ETP holders or their clearing firms receive PCX / ArcaEx RIO blotters from NSCC for executions performed on the ArcaEx on T+1. These blotters display the contra ETP Id. The Routing Broker ETP ID ARCA will be used for listed issues while the ETP ID ARRB will be used for OTC issues.

Appendix II – ArcaEx / PCX RIO Output

The exhibit below is provided as an example of DTCC’s Regional Interface Operations (RIO) Output.

1 NATIONAL SECURITIES CLEARING CORPORATION		REGIONAL INTERFACE OPERATIONS REPORT - RIO										PAGE	182
STOCK S A L E CONTRACT		TRANSACTIONS RECORDED FOR SETTLEMENT AT NSCC										T-DATE:	T+0

TOTAL	1,900	57,505.00											

The highlighted record above identifies a trade which has been busted. Busted trades are identified on the RIO output with an “R” in the reversal indicator field.

Appendix III – FIX Drop Copy File Layout and Sample

The message header format is as follows:

Message Header

Tag	Field Name	Req'd	Comments
8	BeginString	Y	FIX.4.0 <i>(Always unencrypted, must be first field in message)</i>
9	BodyLength	Y	<i>(Always unencrypted, must be second field in message)</i>
35	MsgType	Y	<i>(Always unencrypted, must be third field in message)</i>
49	SenderCompID	Y	<i>(Always unencrypted)</i>
56	TargetCompID	Y	<i>(Always unencrypted)</i>
115	OnBehalfOfCompID	N	Trading partner company ID used when sending messages via a third party <i>(Can be embedded within encrypted data section.)</i>
128	DeliverToCompID	N	Trading partner company ID used when sending messages via a third party <i>(Can be embedded within encrypted data section.)</i>
90	SecureDataLen	N	Required to identify length of encrypted section of message. <i>(Always unencrypted)</i>
91	SecureData	N	Required when message body is encrypted. Always immediately follows SecureDataLen field.
34	MsgSeqNum	Y	<i>(Can be embedded within encrypted data section.)</i>
50	SenderSubID	N	<i>(Can be embedded within encrypted data section.)</i>
57	TargetSubID	N	“ADMIN” reserved for administrative messages not intended for a specific user. <i>(Can be embedded within encrypted data section.)</i>
116	OnBehalfOfSubID	N	Trading partner SubID used when delivering messages via a third party. <i>(Can be embedded within encrypted data section.)</i>
129	DeliverToSubID	N	Trading partner SubID used when delivering messages via a third party. <i>(Can be embedded within encrypted data section.)</i>
43	PossDupFlag	N	Always required for retransmissions, whether prompted by the sending system or as the result of a resend request. <i>(Can be embedded within encrypted data section.)</i>
97	PossResend	N	Required when message may be duplicate of another message sent under a different sequence number. <i>(Can be embedded within encrypted data section.)</i>

52	SendingTime	Y	<i>(Can be embedded within encrypted data section.)</i>
122	OrigSendingTime	N	Required for message resends. If data is not available set to same value as SendingTime <i>(Can be embedded within encrypted data section.)</i>

Message trailer

Each message, administrative or application, is terminated by a standard trailer. The trailer is used to segregate messages and contains the three digit character representation of the Checksum value.

The message trailer format is as follows:

Message Trailer

<i>Tag</i>	<i>Field Name</i>	<i>Req'd</i>	<i>Comments</i>
93	SignatureLength	N	Required when trailer contains signature. <i>Note: Not to be included within SecureData field</i>
89	Signature	N	<i>Note: Not to be included within SecureData field</i>
10	Checksum	Y	<i>(Always unencrypted, always last field in message)</i>

Appendix VI – ArcaEx Compression

Trade compression is the process whereby many trades are aggregated into as few trades as possible based on the specific compression criteria of ETP holder, Contra ETP holder, stock, and side.

In the example below ArcaEx will compress trades by ETP holder FRM0 and domain DOMAIN1, ETP counterparties FRM1 and FRM2 with domains CONTRA1 and CONTRA2, stock (EMLX), and contra-side.

-----ETP holder-----										-----ETP Counterparty-----					
#	TradeDate	Time	ETPID	b/s	sym	vol	price	type	clr#	Domain	ETPID	b/s	type	clr#	Domain
1.	4/5/2002	13:45	Frm0	BUY	EMLX	200	36.340000	QSR	352	DOMAIN1	Frm1	SLL	QSR	312	CONTRA1
2.	4/5/2002	13:43	Frm0	BUY	EMLX	200	36.560000	QSR	352	DOMAIN1	Frm1	SLL	QSR	312	CONTRA1
3.	4/5/2002	13:40	Frm0	SLL	EMLX	100	36.550000	QSR	352	DOMAIN1	Frm2	BUY	QSR	322	CONTRA2
4.	4/5/2002	13:40	Frm0	SLL	EMLX	100	36.570000	QSR	352	DOMAIN1	Frm2	BUY	QSR	322	CONTRA2
5.	4/5/2002	13:39	Frm0	SLL	EMLX	100	36.630000	QSR	352	DOMAIN1	Frm2	BUY	QSR	322	CONTRA2
6.	4/5/2002	13:39	Frm0	SLL	EMLX	100	36.660000	QSR	352	DOMAIN1	Frm2	BUY	QSR	322	CONTRA2

ArcaEx can compress trades 1 and 2 into one trade because the ETP holder, ETP counterparty, stock, and contra-side match. The compressed trade will be between the ETP holder's DOMAIN1 and the contra ETP holder's domain CONTRA1 and where the ETP holder and domain DOMAIN1 is the BUYer the contra ETP holder and domain CONTRA1 is the SLLer and the compressed trade is 400 shares at an average price of 36.45

ArcaEx can compress trades 3 through 6 because the ETP holder, ETP counterparty, stock, and contra-side match. The compressed trade will be between the ETP holder's DOMAIN1 and the contra ETP holder's domain CONTRA2, where the ETP holder and domain DOMAIN1 is a SELLer and the contra ETP holder's domain CONTRA2 is a BUYer of 400 shares at an average price of 36.6025.

Therefore in this example, ArcaEx will yield **two** compressed trade records for RIO transmission instead of six.
